Welcome to Expershare:

ExperShare, LLC is a professional services firm committed to promoting successful application of software engineering best practices for our client companies, thereby realizing improved quality, time-to-market, and managed risk in software development initiatives. We deliver professional services with emphasis on formal methods (Unified, Agile, and derivations of iterative development); requirements engineering; UML design and software architecture following component-based, model-driven (MDA) and service-oriented (SOA) models; automated build and test infrastructure; and performance engineering. ExperShare has achieved great success in client engagements by sharing our collective, pragmatic knowledge of software engineering gained through decades of development experience and lessons learned across dozens of projects and domains. ExperShare partners deliver professional services based on first-hand, practical experience in addition to current industry practices and solid academic foundations. ExperShare builds custom engagements to optimize value driven by the specific needs of each individual client. Professional services are typically delivered through a combination of consulting, mentoring, training, hands-on development and independent validation & verification (IV&V) services around the core software engineering disciplines. ExperShare partners are all senior level practitioners, with average 20+ years practice experience and extensive project portfolios.

ExperShare was founded in 1999, and is a California-based Limited Liability Corporation. We are pleased to celebrate 10 years of serving our customers!
